

NOROVIRUS

Fleetfield

ARE YOU READY?

NOROVIRUS - What is it?

Norovirus, sometimes known as the winter vomiting bug is the most common stomach bug in the UK, affecting people of all ages.

As the name suggests it is a virus. The virus has the ability to remain infectious if it is not cleaned with a suitable product. In particular ordinary detergents do not kill the virus.

NOROVIRUS - Who does it affect?

Between 600,000 and 1 million people in the UK catch norovirus each year. The virus is easily transmitted from one person to another. It can be transmitted by contact with an infected person; by consuming contaminated food or water, or by contact with contaminated surfaces or objects.

The infectious dose is very low, swallowing as few as 1-100 particles may be enough to cause illness. Outbreaks commonly occur in semi-closed environments such as hospitals, nursing homes and schools, where people are in close contact with one another for long periods.

WHAT MEASURES CAN YOU TAKE?

Prevention

We are now supplying Selgiene Extreme, certified to EN 14476:2005 and independently proven to kill the Norovirus, HIV, Hepatitis C and H1N1 influenza viruses.

Also certified to kill Clostridium difficile and common food poisoning bacteria including Salmonella typhimurium, Listeria monocytogenes and Escherichia coli.

Clean up

Using the Fleetfield Body Fluid Spill Pack. Everything you need to deal with up to 25 spillages.

Each pack contains;

Super Absorber Powder - Effectively absorbs any liquid.

Enzyme Digester - Digests the bacteria associated with bad odours.

Plastic Scraper - Helps remove any solids.

Disposable Gloves.

Disposable Cloths.

Yellow Refuse Sacks.

Training and Instruction Card.
